

# Remote Workforce Management with DeskSight.AI

## Why do you need a tool to manage remote workforce?

Track time of individual projects and tasks

Keep a check on critical operations

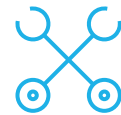

Automate time tracking for client deliverables

Comply to HR and security policies

Set KPIs and measure performance

Optimize usage of IT infrastructure

## The key challenges of remote workforce management

- **Remote Project Management**

Managing teams and employees across locations is one of the biggest challenges of remote working. Managers need to devise work schedules for the team members to ensure optimal resource usage to meet deadlines.

- **Metrics to Monitor Productivity**

How do you ensure if every member of your team is optimally productive? How do you ensure your team members are not engaging in non-productive work during office hours? And if your project is billable, how do you ensure transparency to your client?

- **Distractions**

While working from home, employees tend to get distracted by non-work activities. With no manager around, employees often spend hours on the Internet to check personal emails, use social media, and access non-work-related sites.

- **Complying to HR Policies**

Remote working has no mechanism to track attendance, making it difficult for the human resource (HR) department to track if the employees were present, ensure their working hours, and process payroll and other incentives.

- **Ensuring Security**

Many employees use their unprotected devices for remote working, which are unencrypted and have no antivirus installed. They access risky webpages, which can compromise enterprise as well as personal data on the system.

- **Underutilized IT Infrastructure**

Organizations spend huge amounts of money on purchasing software licenses for employees, a bulk of which lies unutilized.

**How can DeskSight help you have complete visibility on your remote workforce?**

- **Active Time Tracking**

Automatically record active screen time of employees

- **Productivity Inspection**

Get complete visibility on productive working hours of all the teams across the organization

- **Efficiency Projection**

Measure engagement time of every employee over a specific period

- **Remote Attendance**

- Track employee's attendance with first log-in and last log-out
- Detect deviation in scheduled working hours by monitoring early/late log-in/log-out

- **Web and App Usage Tracking**

Monitor employee activity with a detailed log of website visits and application usage for every user

- **Title Tracking**

Capture the title of the active window/document/app with the duration of being active

- **End-User Screenshots**

Capture screen activities of employees with screenshots at regular intervals

- **User Performance Analysis**

Get details of 5 top and bottom performers (of the team/organization) based on monitoring data on a dashboard

- **High-Speed Categorization**

Detect categories of new website and apps in minutes with machine learning-driven website crawler

- **Offline Surveillance**

Monitor activities even when the endpoint is offline to sync data with the server when available

- **Web Search Tracking**

Monitor the intent of the employees by tracking web searches across all browsers
